VIRTU USA

Serenity Collection

CLEANING GUIDE

All VIRTU USA products are manufactured with non-porous materials that helps minimize grime and calcium deposits. We recommend users wipe to remove any surface dirt with a soft cloth after each use. A mild abrasive product, such as Mr. Clean, may be used for standard cleaning.

Petroleum based products such as paint thinners or other solvents should never be used, as they may damage the surface. Do not use abrasive cleanser products. For more difficult stains, use a mildly abrasive cleanser such as Soft Scrub, Comet Soft Cleanser or similar products.

To repair a scratched or damaged product, automotive sanding and buffing techniques may be used. Begin with a lower grit sand paper, 600 grit, followed with 800 grit, and finally finished in 1200 grit. Lower grit sand paper is more course, and high grit sand paper is more fine. Finish the product by polishing the surface using a soft cloth and automotive polishing compound. Please contact VIRTU USA for extensive repair questions and recommendations. Be prepared to send picture photos of the damaged area.
